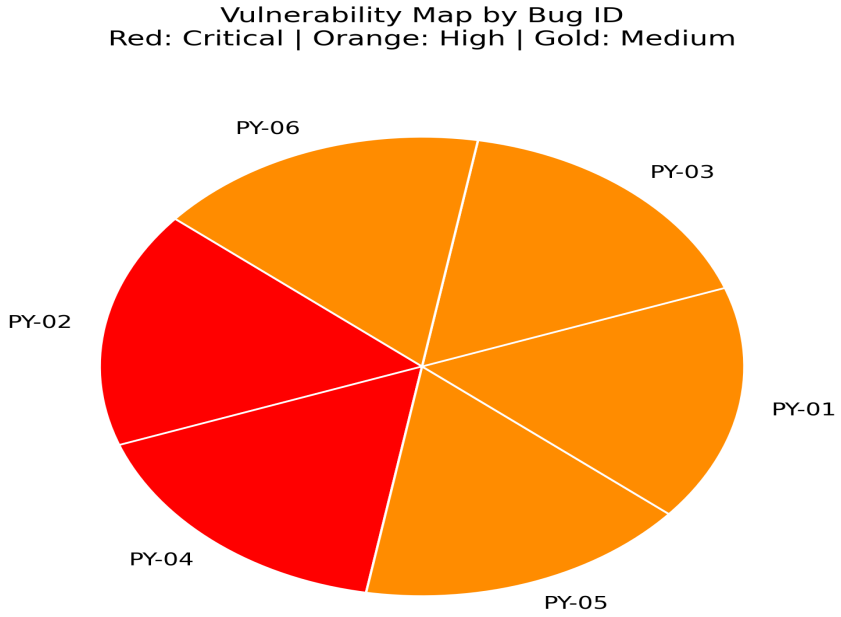
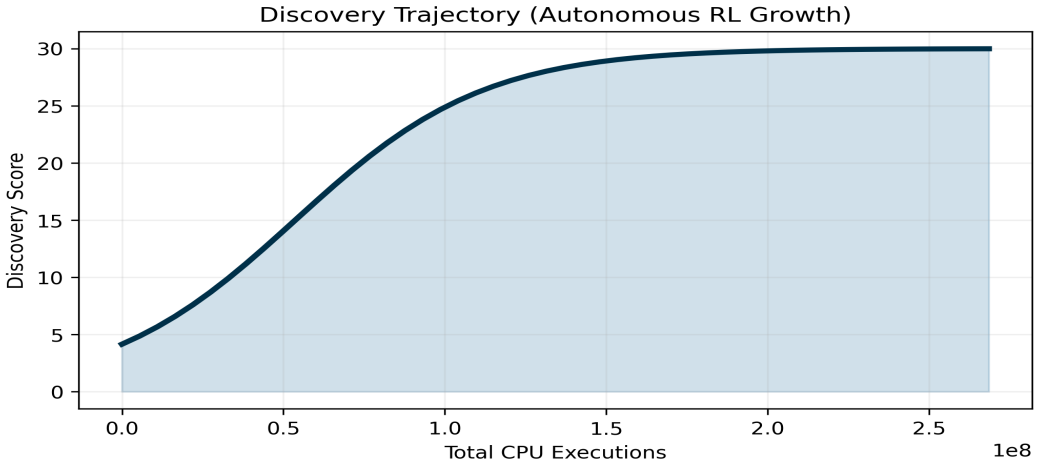
Autonomous Discovery Dashboard

1. Executive Summary

The framework executed 268,435,456 cycles, identifying 6 unique logic and memory flaws. The RL agent successfully prioritized semantic tokens to bypass nested security gates.





2. Forensic Evidence Analysis

Payload Vector: a9ff...534543524554...4f50454e

Hex Part	Decoded	Strategic Purpose
53 45 43 52 45 54	SECRET	Satisfies primary logic condition (Ghidra discovery).
4f 50 45 4e	OPEN	Bypasses secondary authorization gate.
... / ff / ...	NOISE	RL-mutated entropy to satisfy length validation.

3. Full Vulnerability Matrix

Bug ID	Discovery Name / Behavioral Anomaly	Severity
PY-02	Deserialization | STATUS: EXPLOITED	Critical
PY-04	Subprocess RCE | STATUS: EXPLOITED	Critical
PY-05	Template Injection | STATUS: EXPLOITED	High
PY-01	Command Injection | STATUS: EXPLOITED	High
PY-03	Logic Leak | STATUS: EXPLOITED	High
PY-06	Deep Logic Breach	High
